

Harry Perkins Institute of Medical Research Installs a Complete Signage Solution Powered by Signagelive

HARRY PERKINS INSTITUTE OF MEDICAL RESEARCH

Since 1998, the **Harry Perkins Institute of Medical Research** has grown to become one of Australia's leading adult medical research centres, where more than 450 research and trial staff work together to defeat major diseases. It is located across two new state-of-the-art research facilities co-located with the major teaching hospitals.

The Opportunity

One of the Institute's partner organisations was already using Signagelive and were very happy with every aspect of the solution. In addition **Amped Digital** had provided highly effective implementation and ongoing support services and the combination was highly recommended.

Given the Institute's existing inflexible proprietary signage infrastructure - where everything had to come from one manufacturer, software updates were large projects with complex firmware dependencies, and they couldn't simply choose the best or most cost effective devices.

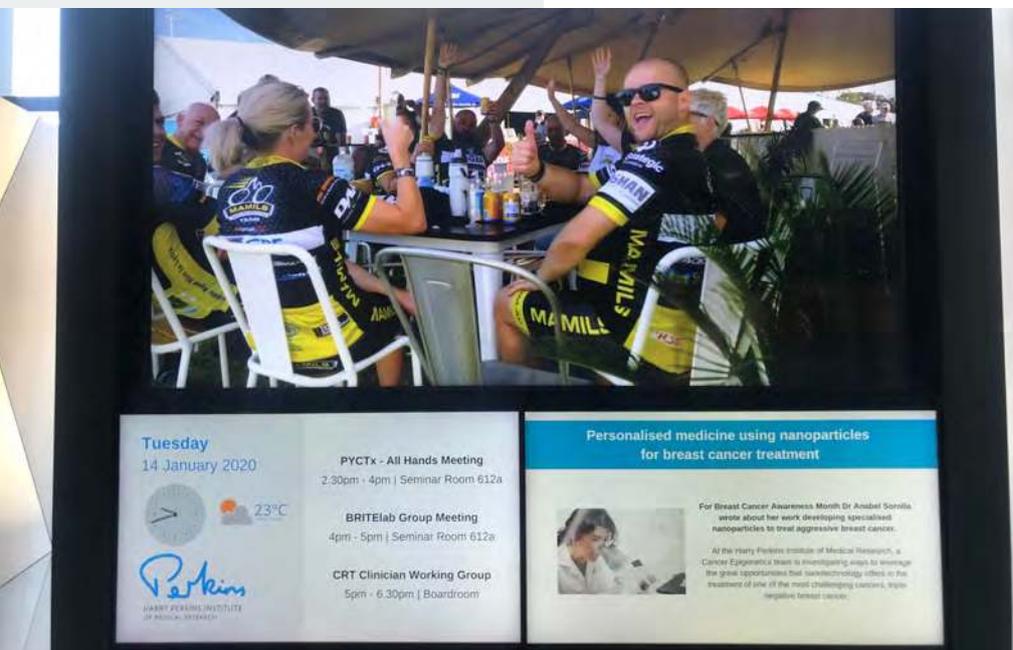

Key Project Requirements

The infrastructure was already in place as a proprietary solution when the buildings were completed in 2013/14 and Signagelive has significantly improved upon this at every level. The signage across our 2 state-of-the-art research buildings with multiple tenants is a vital and valuable part of our communications strategies and our brand and therefore Signagelive has provided major business benefit to the institute.

The purpose of this project was to increase platform reliability and time spent managing the system to a minimum, taking the stress away from facilities management allowing them to focus on other tasks other than just updating their internal digital signage communications.

The proprietary solution could meet the basic requirements though nothing like as effectively and efficiently as Signagelive.

The existing solution was at the end of life and was going out of support. The business case was that Signagelive was both the cheapest and the most functional and flexible replacement solution that we evaluated.

The Solution

Harry Perkins uses Signagelive in conjunction with **BrightSign** to provide a complete signage solution across the 2 Perkins Research Institute facilities. This solution manages the creation, scheduling and delivery of content to a large number of LED screens, info boards and our large foyer banner displays.

Signagelive has been the proverbial breath of fresh air delivering significant cost savings and reduced administration overheads, and provides a solution that is far more agile in presenting content.

BrightSign media players were chosen purely due to their reliability in these fast-paced environments, the XT244 offering POE+, the ability from frame-accurate synchronisation along with full feature support from the Signagelive CMS, means from installation to content management the system is simple to manage and support.

Signagelive is a very complete solution that doesn't need lots of training, doesn't consume huge amounts of time to maintain and is reliable in operation.

Challenges

Harry Perkins benefited hugely from the skills and experience of Amped Digital. There was considerable time and effort in the analysis and design stages and they didn't lose much time dealing with unexpected issues. Overall it was a quick and well-executed project completed ahead of schedule and within budget.

The beauty of BrightSign media players is the simplicity of setup (virtually and physically) allowing for plug and play use and rapid troubleshooting of issues - if there were any issues during the initial installation phase.

Key Benefits

The solution is flexible in so many ways to address Harry Perkins different tenant requirements. As equipment such as panels age, they have options to deploy new technology and reuse old equipment where possible – which is both cost-saving and also reduces e-waste. Being cloud-based and having a simple licensing model means that Harry Perkins have not had to purchase on-premises software licenses and maintain fewer virtual servers with all the associated costs and overheads such as backups, patching etc.

Evidence of Success

Much improved communications via the greater functionality available. Harry Perkins tenants adore working together with the FM team delivering more dynamic content.

"Signagelive has proven to be an excellent long-term solution for our myriad corporate and tenant needs. We have complete confidence that its functionality and flexibility can meet future demands as new business requirements emerge and will continue to enable us to make optimal and cost-effective use of new products and technologies to help promote research."

Andy Crowhurst
Facilities Operations Manager
Harry Perkins Institute of Medical Research

"Our team have worked with many CMS's on the market and we particularly enjoy the process from start to finish implementing Signagelive into new environments for our clients."

The Signagelive solution was the right fit for Harry Perkins as they have a range of staff in different departments required to manage content in designated areas. The reliability of the Signagelive on the BrightSign media player is outstanding and something that we believe solves the best both worlds in hardware and software for Digital Signage solutions.

Signagelive has the features of tier 1 enterprise CMS's with the simplicity of Facebook as a user interface."

Dylan Holtzhausen
Director of Operations
Amped Digital

"Signagelive and Amped Digital have successfully partnered on many projects in a relatively short period of time. Matt, Dylan and their team take a professional and honest approach rarely seen in the industry. The Harry Perkins Institute is our first major project undertaken together."

From the start, we were able to meet the existing needs and exceeded expectations by offering additional features which The Harry Perkins Institute flagged as a necessity. We were able to provide these literally 'out of the box'. The flexibility and scalability of Signagelive were evident in the outcome."

Nick Curulli
Business Development Manager
Signagelive
