

ACTIVE DIRECTORY AND SINGLE SIGN ON

If you are using OneLogin, PingFederate, Okta or Azure Active Directory then you can connect Signagelive to these services. This will allow you to manage your user access within the same SSO tools you're familiar with.

This functionality is ideal for larger Signagelive networks or companies that need to manage a larger amount of users.

- Easily remove user access when someone leaves the organisation.
- Enable two-factor authentication for Signagelive users by utilising the 2FA on your chosen SSO provider.

IS THERE A LIMIT TO THE AMOUNT OF USERS I CAN ADD TO ACTIVE DIRECTORY?

No. Active Directory is enabled on a network-by-network basis, meaning that regardless of your user volume, you will be able to add them to your SSO process.

WHAT DO I NEED TO DO TO ENABLE THE CONNECTION FOR ACTIVE DIRECTORY?

Once you have Active Directory enabled, we will request some information to tie your SSO service and Signagelive together. Once completed, you will be able to manage your users' access to Signagelive via your preferred SSO service.

“Our team has had an excellent experience throughout the years working closely with Signagelive. From initial training and onboarding of new users to aftercare and support the product is solid and reliable and is recommended for small businesses through to enterprise.”
