

# SIGNAGELIVE AND BRIGHTSIGN SERIES 5

## BETTER DIGITAL SIGNAGE FOR THE FUTURE

Did you know that you can provision all your BrightSign devices at once? Hundreds of devices can be configured quickly and easily to remove the headache of player configuration at any scale.

### POWERFUL SOLUTION

The XC5 - Multi-screen deployment of one 8k or 4x 4k screens

The XD5 - Faster load times and smoother graphics for HTML5

### FUTURE-PROOF YOUR DIGITAL SIGNAGE

With the latest BrightSign hardware and the ongoing enterprise development of the Signagelive platform, you'll have the best solution for delivering an out-of-this-world experience.

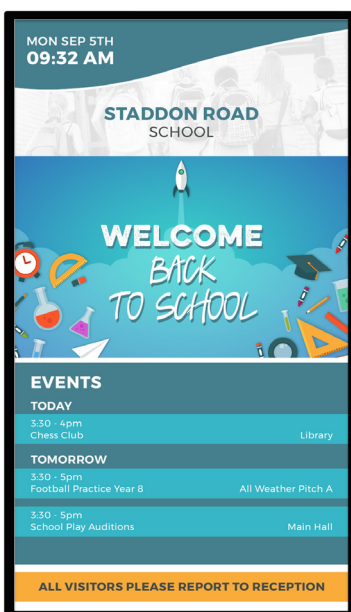

### LIGHTNING FAST HTML5 CONTENT

At scale, manage, schedule and securely display versatile, impactful 8K and/or 4K HTML5 content and videos, as well as highly sensitive data visualisation strategies.

Effortlessly log into your Signagelive content management system (CMS), using the Single Sign-On (SSO) feature, and centrally manage large networks with cutting-edge enterprise-grade functionality.

You can assign various levels of central and local user access with Granular User Permissions, and streamline your workflows with features like the In-built Manager to group players together and send out content updates by region.

Using Signagelive data integrations, such as Secure Dashboards or the dedicated Microsoft Power BI App, it's also simple to scale out your latest business insights.

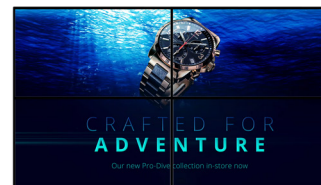

## AN ALL-IN-ONE VIDEO WALL OPTION

For multi-screen showcases, Signagelive and BrightSign Series 5 offer an equally compelling solution. When you pair Signagelive with either of the XC5 Media Players, you can create a streamlined, cost-efficient, yet ultra powerful, all-in-one video wall control system.

Instead of having to invest in a separate CMS solution for high-resolution multi-screen showcases, with Signagelive, you can manage your 8K and/or 4K video wall campaigns, as well as content for the rest of your network, all from the same platform.

This will help:

- Reduce training times
- Simplify management
- Minimise your content workflow

## REAL TIME EVENTS

For further support, the Signagelive feature, Real Time Events (RTEs) enables you to control any connected external devices in the environment. From the Signagelive platform, you can send commands within an asset file to trigger everything from volume, screen brightness or source changes to motorised screen movements.

“Before Signagelive, we had to use BrightAuthor to make dozens of playlists or update manually often - but now we only need to update our marketing once a month, and it will never show anything out of date.”

“It runs flawlessly without ever having to reboot it and with no errors.”
