TRANSFORM CLICKSHARE DEVICES
INTO DIGITAL SIGNAGE WITH SIGNAGELIVE

Signagelive and Barco have teamed up to boost the productivity and return on investment delivered by your ClickShare devices. With the integration of Signagelive, ClickShare CX and C devices can now double up as enterprise-grade digital signage players, when not in use for meetings.
Simply by activating a web-based, or full Signagelive licence, you'll be able to unlock the value of your ClickShare devices as digital signage for your meeting rooms, boardrooms and huddle spaces.
You won't need to invest in any additional screens, media players or software, or even any specialist training, if you're already familiar with ClickShare and Signagelive.

DIGITAL SIGNAGE AT A FRACTION OF THE COST

This integration offers an affordable opportunity to kick-start and/or accelerate plans for the digital transformation of your workplace.

At a fraction of the usual cost, you can use your ClickShare players to trial and measure the effectiveness of digital signage for your business, or alternatively, to add meeting room signage cost-effectively to your company network.

HOW IT WORKS

Activate your choice of licence – the Web Content Licence or Full Standard Licence, and then simply replace the URL of the holding image displayed on every ClickShare device with the Signagelive browser player.

DISCOVER THE BENEFITS

Signagelive integrated ClickShare players can improve workplace operations and staff communications.

OPTIMISE MEETING ROOM USAGE

You can use free calendar integrations to display your company Google or Outlook calendar, and check, at a glance, meeting room availability.

IMPROVE STAFF COMMUNICATIONS AND BUSINESS OUTCOMES

There are also a whole host of applications from the Signagelive Marketplace that you can utilise to create on-screen notifications, corporate branding, and pre-meeting reminders. Use your ClickShare players to immerse employees in your company culture, and to keep them up-to-date with the progress of key company objectives every time they step into your meeting rooms.

EMPOWER TEAMS WITH THE SECURE DISPLAY OF DATA

When used with Signagelive Secure Dashboards, your ClickShare players will also allow for the secure display of any data dashboards from business intelligence platforms, such as Microsoft Power BI, GROW, Tableau and Monday.com.

Share your company data during in-person team meetings, but without the risk of making it public through a URL, or exposing your login credentials.

By publishing live company data on your meeting room ClickShare players, sales teams can, for instance, see, at a glance, the health of the entire sales process. And marketing professionals can come together to monitor and update marketing campaigns in real-time.
