

GRANULAR USER PERMISSIONS

If you're looking to manage multiple users across a network, Granular User Permissions is for you. Granular User Permissions allows you to control what level of access your users have to the Signagelive platform across all features and functions.

CREATE YOUR USERS WORKFLOW

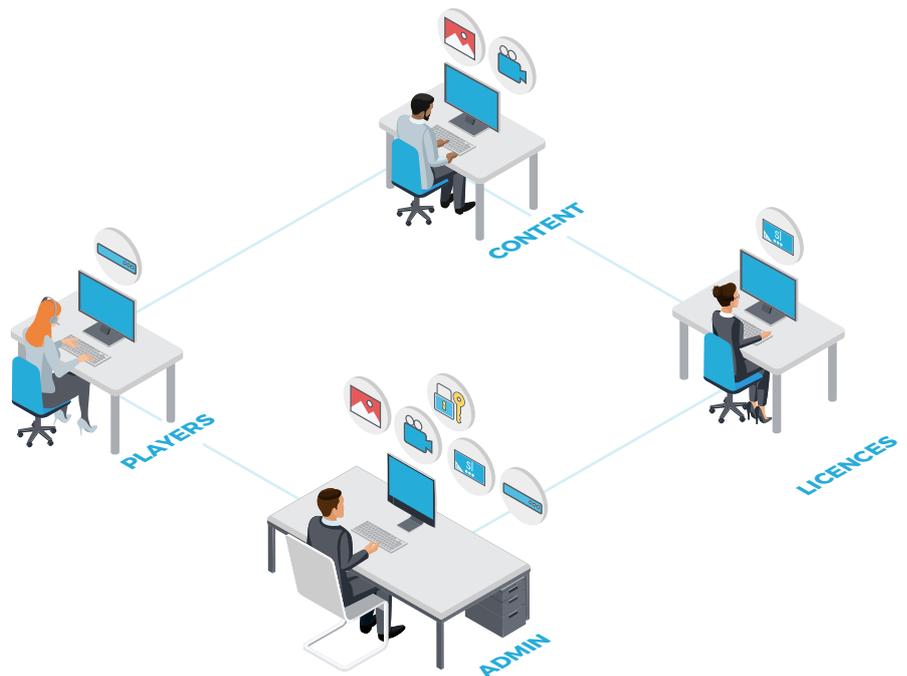

By using Granular User Permissions you can build the visibility any range of users required. Remove or add Dashboards, Licence visibility, Content management and much more.

CREATE USER GROUPS

Create groups that can contain multiple users that pull from a chosen role. You can alter roles and user groups at your discretion, as your user requirements change. User Groups gives you the flexibility and macro management tools to control your users experience.

BUILD YOUR ROLE

Select an existing Role or build a completely new Role from scratch. Choose from over 200 different individual permissions to build the exact Role you and your user needs.

“It is easy to use and signagelive constantly update the way things work and add new ways to add content.”

Anon.

BUILT FOR ENTERPRISE

Granular User Permissions has been built with Enterprise-level networks in mind. We've designed the feature to scale with you and your organisations' needs by replicating and expanding on other Enterprise solutions such as Salesforce, while working with current customer feedback to deliver features required for Signagelive users.

FUTURE DEVELOPMENTS

We aren't finished with Granular User Permissions yet. Future developments have already been planned to expand and extend the permissions to include full hierarchy control and Permissions Sets to expand upon the already powerful tool which is Granular User Permissions.

Granular User Permissions is included in all three Signagelive tiers, Essential, Professional and Enterprise at no extra cost.
