

Looking for a more efficient way to manage your digital signage?

Optimise the management of your digital signage with Hierarchies!

Managing digital signage can be a real headache!

Just to allow some staff to manage one or two players or assets, IT administrators often end up having to grant indiscriminate total network access and control.

It's an unenviable situation to be in, but one that your organisation can now avoid, with the introduction of our market-leading solution – Hierarchies.

The Hierarchies tool helps teams manage digital signage much more efficiently and securely.

It's the fastest and most effective way for you to roll out and manage an architecture that's customised for your organisation, and simple and straightforward for users.

Make it easier for admins to manage everything
under the same network umbrella and to empower staff to manage the playlists, players and assets for which they are responsible.

Efficiently grant and manage
user access control to prevent workflow bottlenecks.

Simplify employee's user experience
by providing access to what they need with a declutter UI.

The Hierarchies tool

With Hierarchies, you can build a hierarchical structure of access to your network.

It's an easy way to split access and re-distribute the workload, so that networks can be run more smoothly and efficiently. Businesses can alleviate pressure on overworked network administrators at the same time as empower selected staff to manage their own sub-networks of players and collateral.

By default, everyone assigned to the same hierarchical level is able to access players and assets within that level, and those below. Managers of each level can also grant general management roles, or with Granular User Permissions, roll out super-customised responsibilities and permissions for each team member within that level.

It makes the management of even larger or more complex signage networks easier. Through the user interface, admins and users, with the relevant enabled permissions can see, at a glance, which levels they have access to, and rights they have.

Reach out to us today to find out what more you can do with Hierarchies.
